

GUNDLAPALLI LOKESWAR RAJU

Software Developer

Hyderabad, Telangana | glokesh8374@gmail.com | 837-470-5188 | github.com/GundlapalliLokeswarRaju | [linkedin.com/in/lokeswar-raju-gundlapalli-58863022a/](https://www.linkedin.com/in/lokeswar-raju-gundlapalli-58863022a/)

PROFESSIONAL SUMMARY

Software developer with about a year and a half of hands-on experience building and shipping backend systems in Python, mostly with Django and FastAPI. I've worked through the full development cycle - requirements, API design, testing, deployment - and I'm comfortable in Git-based workflows and Agile teams. Along the way I've picked up a fair amount of ML/NLP work too, but at core I'm a backend developer who likes debugging real problems and learning whatever the project needs.

TECHNICAL SKILLS

Languages: Python, SQL, C, HTML, CSS, JavaScript

Core Concepts: Object-Oriented Programming (OOP), Software Design Patterns, SDLC

Backend Frameworks: Django, FastAPI

Databases: PostgreSQL, MySQL, SQL Server

API & Architecture: RESTful API design & integration

Testing & Debugging: Unit Testing (pytest, unittest), Debugging, Code Reviews

Version Control & CI/CD: Git, GitHub Actions

DevOps & Cloud: Docker, AWS (EC2, S3), Azure, DigitalOcean, NGINX

Machine Learning & AI: Classification, Regression, Decision Trees, Random Forest, Clustering, PCA, Deep Learning, NLP

ML Frameworks: TensorFlow, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn

Methodology & Tools: Agile/Scrum, VS Code

Soft Skills: Problem Solving, Debugging, Communication, Team Collaboration, Continuous Learning

EXPERIENCE

AI Engineer — Brolly Solutions

Mar 2026 – Present | Hyderabad

- Maintain a Django backend on PostgreSQL that handles our lead engagement workflows - wrote most of the data models and API layer myself.
- Built an AI calling agent that picks up new leads from a Google Sheet, calls them, and has a real conversation to gauge interest - this was the core feature of the product.
- Wrote the logic that pulls structured info out of the call transcripts and pushes it back into the sheet so the sales team can see lead status without digging through recordings.
- Handle deployment and uptime on DigitalOcean; since calls happen live, downtime directly means missed leads, so I keep a close eye on this.
- This became a subscription product for training institutes - faster follow-up on new leads, better conversion for them.

Software Engineer Intern — BigEBrains Pvt Ltd

Feb 2025 – Sept 2025 | Hyderabad

- Built RESTful APIs in FastAPI for product/vendor discovery; worked closely with the Agile team to turn loose requirements into something shippable.
- Set up web scraping using DuckDuckGo's API, Tavily, and CrewAI for real-time product and vendor lookups.
- Handled deployment on AWS EC2 with Docker and NGINX, and got GitHub Actions running for CI/CD.
- Part of the team that shipped bigclasses.ai and bigebrains.com on a React + Django stack - wrote unit tests and did code reviews before anything went live.

PROJECTS

VoxFlow — Telugu-First AI Voice Agent

Mar 2026 – Present

Company: Brolly Solutions | Tech: Python, FastAPI, OpenAI Realtime API, WebRTC, RAG, Plivo, Docker

- Built a real-time AI voice tutor that answers digital-marketing questions in conversational Telugu/Tenglish, over both browser (WebRTC) and phone calls (Plivo) - the goal was to remove the English-only barrier for regional learners.
- Built a RAG pipeline over the course material (PDF/DOCX/TXT) - chunking with overlap, OpenAI embeddings, cosine top-K retrieval, and a disk-cached index that detects when source files change - so the model answers from real documents instead of making things up.
- Put together a full-duplex audio pipeline with FFT-based voice-activity detection, adaptive noise reduction, and pipelined TTS; used mu-law passthrough for telephony and direct WebRTC in the browser to keep latency low.
- Structured the backend in FastAPI across ~26 modules, with a pluggable provider layer so it can swap between OpenAI and Groq, plus streaming chat endpoints, outbound lead-calling, and lead capture into Google Sheets from uploaded XLSX files.
- Locked it down for production - token and Basic auth with constant-time comparison, fail-fast startup checks, per-IP rate limiting on paid routes, CSP/HSTS headers, proxy-aware IP handling, and protection against XLSX decompression-bomb uploads.
- Took test coverage from ~43 basic tests to 152 tests at 90% line coverage, containerized it with Docker Compose, and set up a GitHub Actions CI pipeline (ruff + pytest + coverage) with pinned dependencies.

AI-Powered Vendor Intelligence Platform

Feb 2025 – June 2025

Client: Acads360 | Full-Stack AI Development & Deployment

- Built a B2B platform to help buyers research and compare vendors - it pulls listings, analyzes them, and narrows down options using LLMs and a multi-agent setup.
- Scraped vendor and product data from IndiaMART and TradeIndia, plus DuckDuckGo Search and Tavily for broader coverage.
- Used CrewAI to coordinate the scraping agents and stored everything in PostgreSQL.
- Shipped it on AWS EC2 with Docker and NGINX, and set up a GitHub Actions pipeline so deploys weren't manual.

AI Automation – Voice Analytics & Sentiment Analysis

Nov 2025 – Feb 2026

Company: Skillkoder | Client Domain: Hospitality (Green Park Hotels, Avasa Hotel, Mari Gold Hotel) | Role: AI/ML Engineer

- Built a pipeline that goes through roughly 700 customer service calls a day for a few hotel chains and flags how each one went.
- Every call gets transcribed with Whisper (Large) - handles multilingual audio reasonably well, which was a requirement here.
- Used Ollama to run sentiment/conversation analysis on the transcripts, sorting calls as Positive, Negative, Neutral, Rude, or Standard.
- Also flags whether staff used the standard greeting, which the hotels use to track how consistently their team follows protocol.
- Before this, someone had to listen through calls manually - this pipeline cut that down by around 90%.
- Pipeline handles 20,000+ recordings a month without needing manual intervention.
- It's grown into a subscription product now, so there's an ongoing relationship with these clients rather than a one-off build.

Tech Stack: Python, Whisper (Large), Ollama (LLM), NLP, Sentiment Analysis, Audio Processing, Linux

ACADEMIC QUALIFICATION

Bachelor of Technology (B.Tech) – Computer Science & Engineering 2020 – 2024

G.V.R & S College of Engineering and Technology | JNTU Kakinada, Guntur | CGPA: 7.9

Intermediate (MPC) 2018 – 2020

Sri Chaitanya Jr College, Badvel | Board of Intermediate Education, AP | CGPA: 7.50

Secondary School Certificate (SSC) 2017 – 2018

Sri P Gopi Reddy High School, Badvel | Board of Secondary Education, AP | CGPA: 9.7

ACHIEVEMENTS

- Designed and deployed real-time data pipelines using Azure Data Factory.
- Participated in AI/ML hackathons and online challenges (Kaggle).
- Recognized for quick learning and teamwork during academic and project work.
